

Position: Full Stack Developer

Contract Based – 3-6 Months, with Permanent Potential

The Full Stack Developer will be responsible for the development and implementation of new features and components for our traceability and Organic systems. You will join an experienced team dedicated to creating cutting edge, mobile friendly web applications that give both staff and customers a first-class experience. You will be responsible for developing these applications, while collaborating closely with product and UX teams.

Roles and Responsibilities:

- Build modular, scalable and testable applications in order to grow traceability & organic products over time
- Create back-end functionality to support front-end development using React workflows
- Implement responsive web designs
- Develop and maintain new frontends that leverage existing APIs
- Work in-concert with management & team members to fully grasp functional requirements, collaborate directly with other developers and UX designers
- Keep up with technology changes in this space and leverage them when appropriate

Required Skills & Experience:

- College Degree, Computer Science or related technical discipline
- 3+ years' experience with JavaScript ES6+,
- 2+ years' React with Redux or other JavaScript Framework and/or server-side development experience in Node.js
- Experience
 - with programming in one or more server-side languages (Node.js, PHP, .NET, Elixir, etc.)
 - creating schemas, querying, updating, and managing databases
 - using Git and an understanding of the GitHub workflow
 - building and consuming APIs to interact with other applications using REST
 - working in an Agile environment to quickly iterate and deliver features
- Strong understanding of
 - Adaptive and Responsive Web Design Techniques
 - HTML, CSS, and layout of web pages & applications
 - security practices and protecting sensitive data
- Ability to operate effectively within short dev cycles using Agile methodologies
- Proficient in using Microsoft Office (Word, Excel, Outlook, Teams, PowerPoint)
- Excellent communication, technical documentation & professional presentation skill

Additional Preferred Qualifications

- We understand that each candidate has a unique background and experience. The following qualifications are not required but can strengthen the candidacy for applicants. Experience with
 - user-interface prototyping tools (InVision, Zeplin, etc.)
 - SQL and Database software (PostgreSQL, Microsoft SQL Server, MySQL, etc.)
 - .NET Framework (C# and VBScript)
 - Amazon Web Services

Working Conditions:

- Castle Rock, CO or Remote Option
- 3-6 month contract based, with permanent potential.
